

UNITY

UNITY

Unity has a DAO token project in which it will have everything in the same way as a traditional DAO. The root token will grant governance rights and voting by the holders.

One of the main objectives of Unity DAO is to partner with projects under construction or in the early stages. It will provide support with teams, structures, and financial resources for the development and promotion of these new projects.

Thus, below you will learn more about this incredible Unity project and also what a DAO is, how it works, and its advantages. Don't miss out on being part of this project that could change your life.

DAO

Before learning more about this interesting project, it is necessary to understand what a DAO is, how it works, and its main advantages.

DAO stands for Decentralized Autonomous Organization. It is a company or organization that is based on blockchain and governed by a token.

Anyone who holds and buys these tokens gains the ability to vote on relevant matters directly related to the DAO.

DAOs generally use self-executing computer programs and smart contracts that perform specific functions when certain conditions are met.

With it, it becomes possible to work with someone without needing to trust that person, as all the security and trust are in the technology and the codes that define the organization.

This allows for an infinite number of new opportunities for the coordination and collaboration of global projects.

Unity DAO Project

How does a DAO work?

Bitcoin is considered the first fully functioning DAO because it has a set of pre-programmed rules, operates autonomously, and is coordinated through a distributed consensus protocol.

From this moment on, the use of smart contracts on the Ethereum platform was enabled, bringing the generation of DAOs closer to people and shaping their current form.

To be fully operational, a DAO needs to operate based on a set of rules coded as a smart contract. It is a computer program that exists autonomously on the internet and needs people to perform tasks it cannot do on its own.

After that comes the funding phase. A DAO needs to have some form of internal ownership—tokens that the company can spend or use as rewards for certain activities within it.

By making this investment, however, users gain voting rights and, as a result, also influence how the DAO operates.

Since all transactions and rules are recorded on the blockchain, it is completely immutable, incorruptible, and transparent.

When a DAO goes live, all decisions on how and where to spend its funds are made through consensus. Everyone who bought a part of it can make proposals about its future. In this way, the most relevant proposals are voted on, and for any activity to be carried out, the majority must agree.

The Advantages of Using a DAO

There are many advantages to using a DAO. See below the main ones, for example:

- **No hierarchy** – there is no hierarchical management, as everyone makes decisions together;
- **Transparency** – by opening the code, it can be viewed by anyone who wants. It is possible, therefore, to consult the history of the decisions made by anyone on the blockchain, because all information is immutable and public;
- **Free access** – anyone with internet access can own DAO tokens and buy them to have decision-making and voting power within a DAO;
- **Profit from funded and created projects by Unity** – 2% of the movement of linked projects will go to Unity purchases;
- **Rules cannot be changed unless you are an investor.**

Thus, there are several advantages to using a DAO, as we previously showed the main ones. See below how the Unity DAO token project will be.

Unity DAO Project

It will have everything a traditional DAO has, and the root token will allow voting by holders, granting governance rights.

One of Unity DAO's main goals is partnerships with projects under construction or in the early stages.

Unity will support with teams, structures, and financial resources for the development and promotion of these new projects.

Thus, this team will develop the contracts of these projects at no cost.

With their Holder fees paid with Unity's DAO token, these new projects will have an automatic buy function of their Unity token holder fee and then its distribution.

Priority will be given to projects that have a real impact on the daily lives of institutions and people.

All projects and any changes to the DAO token will require approval through community voting.

As vantagens de se utilizar uma DAO

- **Transparency:** All decisions and transactions are recorded on the blockchain, which increases transparency and trust among members.
- **Utility:** Tokens can be used to access services, products, or specific features within the organization's ecosystem.
- **Discounts and Benefits:** Token holders may receive exclusive discounts or benefits within the DAO ecosystem.
- **Efficiency:** The elimination of intermediaries can make processes more efficient and faster.

As we have seen, this process is very secure, transparent, and open, where all those who hold DAO tokens can vote and participate in all decisions made in the organization.

Remember that one of the company's main goals is partnerships with projects under construction or in the early stages.

Thus, be sure to be part of this Unity project that has many advantages, participating in the company through tokens.

ROADMAP

PHASE

- ✓ Website Launch
- ✓ Socials created
- ✓ Fairlaunch on Pinksale
- ✓ KYC AUDIT and SAFU certificates

PHASE

- ✓ Pancakeswap Listing
- ✓ Coingecko + CMC Listings
- ✓ 1,000 Holders
- ✓ Marketing Campaign
- ✓ Voting Mechanism

PHASE

- ✓ 5,000 Holders
- ✓ Tokens from first partners
- ✓ Tier 1 CEX Listings

TOKENOMICS
